2.0 ABSOLUTE MAXIMUM RATINGS

The followings are maximum values which, if exceed, may cause faulty operation or damage to the unit. The operational and non-operational maximum voltage and current values are listed in Table 2.

< Table 2. Absolute Maximum Ratings> Ta=25+/-2°C

| Parameter | Symbol | Min. | Max. | Unit | Remarks |
|-----------------------|-----------------|----------------------|----------------------|------|---------|
| Power Supply Voltage | V _{DD} | -0.5 | 4.0 | V | Note 1 |
| Logic Supply Voltage | V _{IN} | V _{ss} -0.3 | V _{DD} +0.3 | V | |
| Operating Temperature | T _{OP} | 0 | +50 | °C | Note 2 |
| Storage Temperature | T _{ST} | -20 | +60 | °C | |

- Notes : 1. Permanent damage to the device may occur if maximum values are exceeded functional operation should be restricted to the condition described under normal operating conditions.
2. Temperature and relative humidity range are shown in the figure below.
 95 % RH Max. (40 °C ≥ Ta)
 Maximum wet - bulb temperature at 39 °C or less. (Ta > 40 °C) No condensation.

4.0 OPTICAL SPECIFICATION

4.1 Overview

The test of Optical specifications shall be measured in a dark room (ambient luminance ≤ 1 lux and temperature = 25±2℃) with the equipment of Luminance meter system (Goniometer system and TOPCON BM-5) and test unit shall be located at an approximate distance 50cm from the LCD surface at a viewing angle of θ and Φ equal to 0°. We refer to θθ=0 (=θ3) as the 3 o'clock direction (the “right”), θθ=90 (= θ12) as the 12 o'clock direction (“upward”), θθ=180 (= θ9) as the 9 o'clock direction (“left”) and θθ=270(= θ6) as the 6 o'clock direction (“bottom”). While scanning θand/or Ø, the center of the measuring spot on the Display surface shall stay fixed. The backlight should be operating for 30 minutes prior to measurement. VDD shall be 3.3+/- 0.3V at 25℃. Optimum viewing angle direction is 6 'clock.

4.2 Optical Specifications

<Table 5. Optical Specifications>

| Parameter | | Symbol | Condition | Min. | Typ. | Max. | Unit | Remark |

| SPEC. NUMBER | SPEC. TITLE NV133FHM-N42 V8.0 Product Specification | | | PAGE 10 OF 31 |

- Notes :
1. Viewing angle is the angle at which the contrast ratio is greater than 10. The viewing angles are determined for the horizontal or 3, 9 o'clock direction and the vertical or 6, 12 o'clock direction with respect to the optical axis which is normal to the LCD surface (see FIGURE 1).
 2. Contrast measurements shall be made at viewing angle of $\Theta = 0$ and at the center of the LCD surface. Luminance shall be measured with all pixels in the view field set first to white, then to the dark (black) state .
(see FIGURE 1) Luminance Contrast Ratio (CR) is defined mathematically.

$$CR = \frac{\text{Luminance when displaying a white raster}}{\text{Luminance when displaying a black raster}}$$
 3. Center Luminance of white is defined as luminance values of 5 point average across the LCD surface. Luminance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in FIGURE 2 for a total of the measurements per display.
 4. The White luminance uniformity on LCD surface is then expressed as : $\Delta Y = \text{Minimum Luminance of 5(or 13) points} / \text{Maximum Luminance of 5(or 13) points}$.
(see FIGURE 2 and FIGURE 3).
 5. The color chromaticity coordinates specified in Table 5 shall be calculated from the spectral data measured with all pixels first in red, green, blue and white. Measurements shall be made at the center of the panel.
 6. The electro-optical response time measurements shall be made as FIGURE 4 by switching the “data” input signal ON and OFF. The times needed for the luminance to change from 10% to 90% is Tr, and 90% to 10% is Td.
 7. Cross-Talk of one area of the LCD surface by another shall be measured by comparing the luminance (YA) of a 25mm diameter area, with all display pixels set to a gray level, to the luminance (YB) of that same area when any adjacent area is driven dark.
(See FIGURE 5).

4.3 Optical measurements

Figure 1. Measurement Set Up

Optical characteristics measurement setup

Figure 2. White Luminance and Uniformity Measurement Locations (5 points)

Center Luminance of white is defined as luminance values of center 5 points across the LCD surface. Luminance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in FIGURE 2 for a total of the measurements per display.

| | | | | |

| SPEC. NUMBER | SPEC. TITLE | | | PAGE |
| | NV133FHM-N42 V8.0 Product Specification | | | 12 OF 31 |

Figure 3. Uniformity Measurement Locations (13 points)

The White luminance uniformity on LCD surface is then expressed as : $\Delta Y5 = \text{Minimum Luminance of five points} / \text{Maximum Luminance of five points}$ (see FIGURE 2) , $\Delta Y13 = \text{Minimum Luminance of 13 points} / \text{Maximum Luminance of 13 points}$ (see FIGURE 3).

Figure 4. Response Time Testing

The electro-optical response time measurements shall be made as shown in FIGURE 4 by switching the “data” input signal ON and OFF. The times needed for the luminance to change from 10% to 90% is Td and 90% to 10% is Tr.

Figure 5. Cross Modulation Test Description

Where:

Y_A = Initial luminance of measured area (cd/m²)

Y_B = Subsequent luminance of measured area (cd/m²)

The location measured will be exactly the same in both patterns

Cross-Talk of one area of the LCD surface by another shall be measured by comparing the luminance (YA) of a 25mm diameter area, with all display pixels set to a gray level, to the luminance (YB) of that same area when any adjacent area is driven dark (Refer to FIGURE 5).

8.0 POWER SEQUENCE

To prevent a latch-up or DC operation of the LCD module, the power on/off sequence shall be as shown in below

- 0.5ms ≤ T1 ≤ 10 ms
 - 0ms ≤ T2 ≤ 200 ms
 - 0ms ≤ T3 ≤ 200 ms
 - 10ms ≤ T13
 - 20ms ≤ T14
 - 0.5ms ≤ T17 ≤ 20ms
 - 200ms ≤ T3+T4+T5+T6+T8
- 0ms ≤ T7 ≤ 50ms
 - 0ms ≤ T10 ≤ 500 ms
 - 3ms ≤ T11 ≤ 10 ms
 - 500ms ≤ T12
 - 20ms ≤ T15
 - 10ms ≤ T16
 - 0.5ms ≤ T18 ≤ 20ms
 - 0ms ≤ T9

Notes:

- When the power supply VDD is 0V, keep the level of input signals on the low or keep high impedance.
- Do not keep the interface signal high impedance when power is on. Back Light must be turn on after power for logic and interface signal are valid.

9.0 RELIABILITY TEST

The Reliability test items and its conditions are shown in below.

<Table 10. Reliability test>

| No | Test Items | Conditions |
|----|--|---|
| 1 | High temperature storage test | Ta = 60 °C , 240 hrs |
| 2 | Low temperature storage test | Ta = -20 °C , 240 hrs |
| 3 | High temperature & high humidity operation test | Ta = 50 °C , 80%RH, 240 hrs |
| 4 | High temperature operation test | Ta = 50 °C , 240 hrs |
| 5 | Low temperature operation test | Ta = 0 °C , 240 hrs |
| 6 | Thermal shock | Ta = -40 °C ↔ 80 °C (0.5 hr), 100 cycle |
| 7 | Drop (non-operating) | 60cm/1 corner/3 edges/6 faces |
| 8 | Shock test (non-operating) | 220G, Half Sine Wave 2msec ± X, ± Y, ± Z Once for each direction |
| 9 | Electro-static discharge test (non-operating) | Air : 150 pF, 330Ω, 15 KV Contact : 150 pF, 330Ω, 8 KV |

10.0 HANDLING & CAUTIONS

(1) Cautions when taking out the module

- Pick the pouch only, when taking out module from a shipping package.

(2) Cautions for handling the module

- As the electrostatic discharges may break the LCD module, handle the LCD module with care. Peel a protection sheet off from the LCD panel surface as slowly as possible.
- As the LCD panel and back - light element are made from fragile glass material, impulse and pressure to the LCD module should be avoided.
- As the surface of the polarizer is very soft and easily scratched, use a soft dry cloth without chemicals for cleaning.
- Do not pull the interface connector in or out while the LCD module is operating.
- Put the module display side down on a flat horizontal plane.
- Handle connectors and cables with care.

(3) Cautions for the operation

- When the module is operating, do not lose CLK, ENAB signals. If any one of these signals is lost, the LCD panel would be damaged.
- Obey the supply voltage sequence. If wrong sequence is applied, the module would be damaged.

| | | | | | | | |

- (4) Cautions for the atmosphere

 - Dew drop atmosphere should be avoided.
 - Do not store and/or operate the LCD module in a high temperature and/or humidity atmosphere. Storage in an electro-conductive polymer packing pouch and under relatively low temperature atmosphere is recommended.
- (5) Cautions for the module characteristics

 - Do not apply fixed pattern data signal to the LCD module at product aging.
 - Applying fixed pattern for a long time may cause image sticking.
- (6) Other cautions

 - Do not disassemble and/or re-assemble LCD module.
 - Do not re-adjust variable resistor or switch etc.
 - When returning the module for repair or etc., Please pack the module not to be broken.
 We recommend to use the original shipping packages.

Figure 7. Outline Dimensions (Rear view)

- Remark:** 1. PCBA cover tape will bulge without external force due to the material character of the tape. The tolerance of PCBA cover tape thickness will not exceed 2 mm from surface of polarizer and thickness of PCBA side can be reformed to normal thickness by external force.
2. If system interfere with panel or twist panel while system operation, it may cause ripple or acoustic noise or other side effect. Please prevent such twist or interfere by system operation.
- 3.The system materials should contain no or less NH4+ ions.
